

Aftercare: Client Instructions

The healing process takes 4-6 weeks, during which you need to be extra careful about your brows.

Here is what you can expect during the healing period:

Day 1 and 2

Your brows are too dark and they look like a block of pigment. Also, redness is present and they might be swollen. You might not be satisfied, but be prepared for this.

Day 3

The first thing you will notice is scabbing. After the ombre powder brows treatment, scabs fall off in one big or a few big pieces.

Day 4 - 10

This period is the most difficult to overcome, Scabs keep falling off, leaving your brows in patches. Your brows are itchy but under no circumstances should you scratch or touch them. Carry on with the aftercare routine and be patient.

Day 10 - 14

Your brows look too light and you must think that the whole process has been unsuccessful. Scabs are not that common anymore. The healing period is almost over.

Day 14 - 21

Your brows are coming back! They are taking their final shape and look much better. However, they might still look a little bit patchy and uneven.

Day 21 - 30

Your brows are completely healed. Now it's time to book a touch-up appointment to correct any possible patches and flaws.

Do:

Clean your powder brows regularly.

Do not saturate brows with facial soap or other solutions on day 1.

Use cotton pads and sterile water and dry the area afterward.

Apply a thin layer of ointment day 3-4. It will make scabs fall off faster. Also, it is good to apply it before showering, to keep the area protected. Do not use it after your brows are healed.

Do NOT:

Don't touch or peel off the scabs.

Don't wash your brows extensively. Use a cotton pad to wipe the area.

Don't wear makeup

Don't go swimming

Don't sleep on your face

Don't have long and hot showers

Don't expose them to the sun

Don't work out or sweat a lot
